

1 SPREADER BAR APPARATUS  
2  
3

4 ABSTRACT OF THE DISCLOSURE

5 The present invention is directed to a spreader bar.  
6 The spreader bar has an elongate central member having a  
7 hollow interior, and a pair of elongate end members wherein  
8 each elongate end member is partially disposed within the  
9 hollow interior of the central elongate member so that a  
10 first portion of the elongate end member is within the  
11 hollow interior of the elongate central member and a second  
12 portion of the elongate end member is external to the hollow  
13 interior. The second portion of each elongate end member  
14 extends to a distal end. The spreader bar has a pair of  
15 sling guides wherein each sling guide is attached to the  
16 distal end of a corresponding elongate end member.
